

HIGH-SPEED DC CIRCUIT BREAKERS FOR FIXED INSTALLATIONS (IEEE)

Type **UR**

DC TRACTION SUBSTATIONS

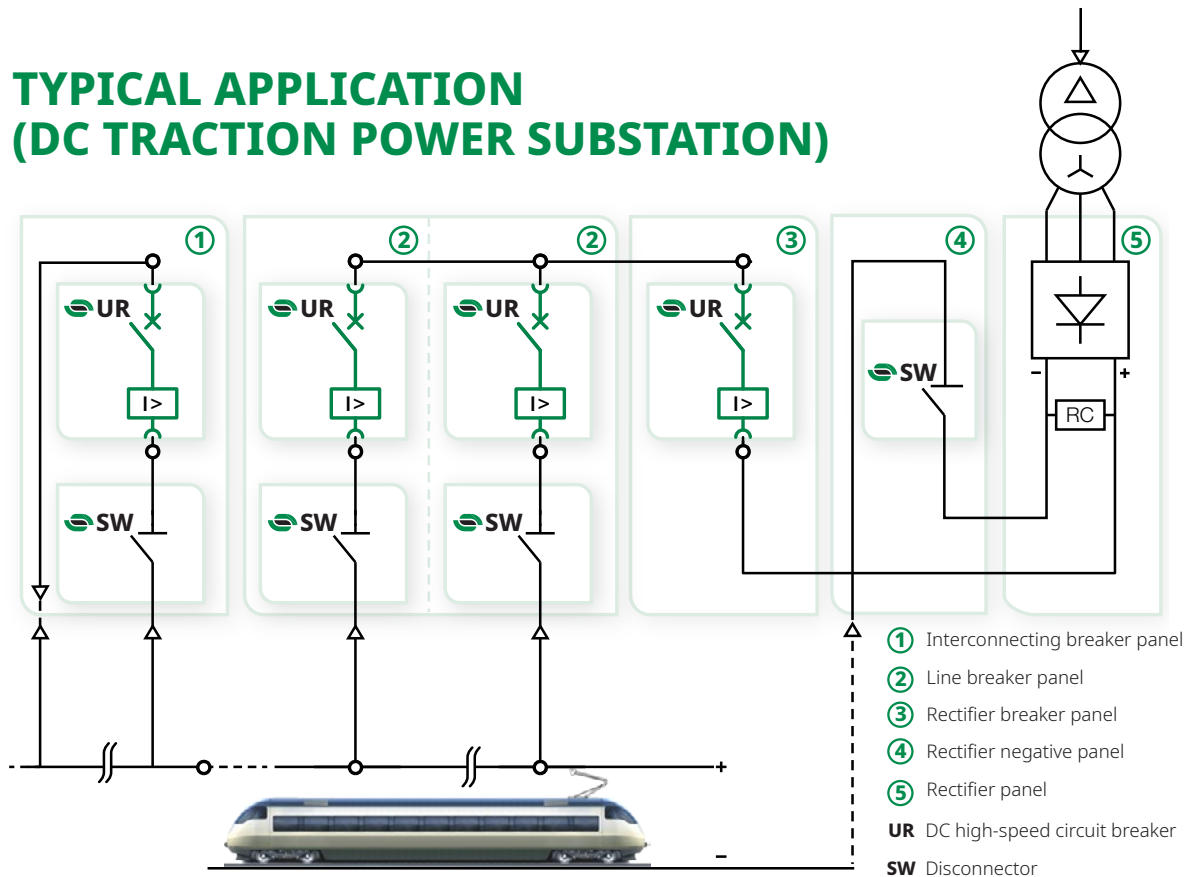

GENERAL INFORMATION

The **UR** range of DC circuit breakers has achieved worldwide acceptance as a well proven design for use in fixed installations. It has been regularly upgraded and adapted to new standard requirements and for different applications over the years, continuously improving the level of performance and functionality. This has led to an impressive service track record throughout the world for the UR product range.

Designed according to IEEE C37.14 and IEEE C.37.16, the UR range can be used for Light Rail and Heavy Rail Transit Systems on the North American territory. Combining a compact design with a high making and breaking capacity, the UR range, with its low number of parts also guarantees high reliability and low maintenance requirements.

TYPICAL APPLICATION (DC TRACTION POWER SUBSTATION)

MAIN FEATURES

- Thermal current up to 8,000 A
- Rated voltage 800 V_{DC} and 1,600 V_{DC} (1,200 V_{DC} for UR80)
- Indoor installation
- Bidirectional or unidirectional overcurrent release
- Trip-free direct acting device
- Limited maximum arc voltage
- Electro-magnetic closing with electric or magnetic holding
- Reference standards: IEEE C37.14 and IEEE C37.16
- Also available according to EN 50123-1/-2, IEC 61992-1/-2 standards (refer to our specific SG101001BEN brochure)
- Insulation material according to EN 45545-2

MAIN BENEFITS

- ✓ Safe with a high insulation level.
- ✓ Very low maintenance requirements with high electrical and mechanical dururances.
- ✓ Simple design with few moving parts resulting in high reliability.
- ✓ High rated short circuit making and breaking capacity.
- ✓ A large number of different options to match the various application requirements.
- ✓ Proven design with worldwide experience and acceptance.

PRODUCT RANGE

⁽¹⁾ Also tested at 1,200 V_{DC}

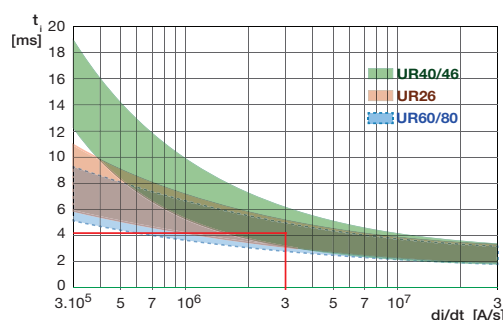

BREAKING CURRENT PARAMETERS

BREAKING CURRENT PARAMETERS

- I^{ss} = Prospective sustained short-circuit current
- \hat{I}_{ss} = Peak of I_{ss}
- di/dt = Initial current rate of rise
- I^d = Setting of maximum current release
- $I_{cut\ off}$ = Cut-off current
- t_c = Time-constant of the circuit
- t_i = Opening time
- U_{arc} = Maximum arc voltage
- U_{Ne} = Rated operational voltage

OPENING TIME T_I

Relationship between opening time t_i and the initial rate of rise of current di/dt for direct instantaneous overcurrent release.

Example for a di/dt of 3×10^6 A/s:

- for UR26: $t_i \sim 4.3$ ms,
- for UR60/80: $t_i \sim 4.1$ ms.

Note: for a shorter opening time on low di/dt , the "indirect release" (shunt trip) option can be used (refer to "Options" section page 9).

LOW VOLTAGE CONTROL DIAGRAM

ELECTRIC HOLDING

E-TYPE

- The circuit breaker remains closed with a **reduced "holding" current**. To open the circuit breaker the holding current is cut-off.
- With **E-type** closing device, the circuit breaker cannot remain closed if the low voltage supply is lost.

MAGNETIC HOLDING

M-TYPE

- The circuit breaker remains closed **without any control current**. To open the circuit breaker it is necessary to reverse the polarity of the current flowing through the closing coil.
- With the **M-type** closing device, the circuit breaker remains closed when the low voltage supply is lost. It requires the control voltage to be present to open.

The **UR** range is equipped with a solenoid coil to perform the usual closing and opening operations. Two different types of closing devices are available: with electric holding (E-type) or with magnetic holding (M-type).

UR60/80 (without ECO-Drive)	5a + 5b	PF	110, 125 V _{DC}	Harting HAN® 32 EE	2	30	M32	SG104063R10100	

The breaker can also be controlled with a rectified AC control voltage.

Note: crimping tools are not in the scope of Sécheron

ECO-DRIVE INTEGRATED CONTROL MODULE UR26/40/46

ECO-Drive is a compact control module integrated with UR circuit breakers, to manage closing-holding sequences with electric control. ECO-Drive is set on the UR breaker's closing device.

MAIN BENEFITS

- ✓ No need of additional hardware to control the breaker.
- ✓ Compact integration.
- ✓ Reduction of overall installation costs.
- ✓ Reduction of operational costs with lower power consumption.
- ✓ Reduction of the risks to damage the closing coil.
- ✓ Full compliance with EN 50121-3-2 standards for EMC
- ✓ Full compliance with EN 50155 § 5.1.1.2 class S2 (short interruption of voltage supply).
- ✓ Full compliance with EN 50155 § 5.1.3 class C1 (supply change over).

- Available for UR26/40/46
- Available for closing device with E-type holding

TECHNICAL DATA

Control circuit

Nominal supply voltage ⁽¹⁾	U_N [V _{DC}]	110
Nominal control voltage ⁽¹⁾	U_{EF} [V _{DC}]	110
Range of voltage		[0.7 - 1.25] U_n
Idle (standby) power	[W]	< 1.6
Nominal closing power ⁽²⁾	P_c [W]/[s]	1,300/0.5
Nominal holding power ⁽²⁾	[W]	< 8
Nominal opening power ⁽²⁾	[W]	< 1.6
Mechanical opening time on opening order ⁽³⁾	[ms]	15-30
Mechanical closing time on closing order ⁽²⁾⁽³⁾	T_c [ms]	~150

⁽¹⁾ Control voltage U_{EF} and supply voltage U_n can be different

⁽²⁾ At U_n and $T_{amb} = +20^\circ\text{C}$

⁽³⁾ Starting when the signal is received by the coil

BIM INDIRECT RELEASE (SHUNT TRIP) WITH INTEGRATED MANUAL RELEASE

		Opening time	Control mode
UR26/40/46	BIM5	4 - 6 ms	CID-3 ⁽¹⁾
	BIM6	12 - 19 ms	Direct battery 77-140 V _{DC}
UR60/80	BIM7	4 - 6 ms	CID-3 ⁽¹⁾
	BIM8	12 - 19 ms	Direct battery 77-140 V _{DC}

The indirect release enables to shorten the opening time when required by specific application. The choice of the relevant type has to be validated by Sécheron prior quoting. This device can also be manually activated.

⁽¹⁾ Not included in the DC circuit breaker - To be ordered separately

BIM5 & BIM6 - UR26/40/46

The terminal block allows the connection between 2.5 mm² cables from the BIM5 and 2.5 mm² cables from the battery and 6 mm² cables from the CID-3. BIM6 is directly connected to the low voltage connector.

BIM7 & BIM8 - UR60/80

The terminal block allows the connection between 2.5 mm² cables from the BIM7 and 2.5 mm² cables from the battery and 6 mm² cables from the CID-3. BIM8 is directly connected to the low voltage connector.

MANUAL RELEASE

Manual releases are safety devices designed to guarantee that the breaker is in OPEN position so as to access the breaker's panel -e.g. for maintenance. The vertical release is automatically actuated while

withdrawing from the panel the trolley on which the breaker is installed. The horizontal release must be manually actuated from the front side of the panel door before opening it.

// UR26/40/46

vertical release

actuation

horizontal release

actuation

// UR60/80

vertical release

horizontal release

actuation

MANUAL CLOSING DEVICE

// UR26/40/46

// UR60/80

The manual closing device, mainly used for maintenance operations, enables to close and open the circuit breaker without low voltage supply and under no load.

CONTACT WEAR INDICATOR (WI) OR OVERCURRENT RELEASE DETECTOR (I>) UR26/40/46

Installed on the rear side of the circuit breaker closing device, these options monitor the position of a rod linked to the breaker's moving contact, which rod actuates a micro-switch.

Based on the selected configuration the detector informs about:

- the reaching of the wear limit of the main contacts of the circuit breaker: function "contact wear indicator".
- the tripping of the circuit breaker through the overcurrent release: function "overcurrent release detector". These two functions cannot be selected together.

Contact wear indicator

POSITION INDICATOR - UR26/40/46/60/80

A mechanical position indicator actuated through a rod linked to the circuit-breaker moving contact gives the position of the breaker.

DESIGNATION CODE FOR ORDERING

- Be sure to establish the designation code from our latest version of the brochure by downloading it from our website "www.secheron.com".
- Be careful to write down the complete alphanumeric designation code with 22 characters when placing your order.
- The customer shall write down the setting of maximum current release value (Id) in its order form.
- For technical reasons some variants and options indicated in the designation code might not be combined.
- The bold part of this designation code defines the device type, and the complete designation defines the identification number of the product, as displayed on the identification plate attached to the product.

Example of customer's choice:
